

11 More

Number of players: 2 **Materials:** Counters of 2 different colors (one color per player), die

Instructions: Players take turns to roll a die and calculate the total of the number rolled plus 11.

After each roll the player places a counter on a corresponding number on the board. For example, if Player 1 rolls a 4 s/he may place a counter on any 15 on the board because $4+11=15$ (think $4+10+1$). Play continues until one player has 4 counters in a row (horizontally, vertically, or diagonally).
